

Daily Work Report – 03/12/2025

Work Summary – Attendance app

Punch-In / Punch-Out Implementation:

Implemented the **Punch-In and Punch-Out functionality** within the Attendance Application to accurately record employee working hours. This includes handling time capture, validation, and storing logs for daily attendance tracking. The new implementation strengthens the attendance flow and ensures more reliable timekeeping.

AI/ML Integration for Face Recognition:

Continued working on the **AI/ML-based face recognition module** for the Attendance App. This involves integrating machine-learning components with the existing Django backend, setting up the recognition pipeline, handling image input, and aligning the ML model with the attendance workflow. The integration aims to automate employee authentication and enhance system accuracy.

Completion of Other Attendance App Modules:

Finalized and refined **most of the other major modules** and API functionalities in the Attendance Application. This includes fixing minor issues, optimizing existing endpoints, and ensuring all features work smoothly as part of the overall system.

Planned Work for 04/12/2025 :

1. Encryption
2. Implementing AI/ML

Name: Cinda Sibichan

Role: Python Developer

Organization: Ziya Academy LLP
