

Daily Work Report – 19/11/2025

Work Summary – Attendance app

Implemented Encryption for Request and Response Data:

Integrated a complete **encryption layer** for both incoming requests and outgoing responses in the Attendance Application. This ensures that sensitive information such as employee data, attendance logs, and authentication details are securely transmitted between the client and server.

Google Form Integration in Attendance App:

Worked on integrating **Google Forms** within the Attendance Application based on project requirements.

Resolved Encryption-Related Errors:

Identified and fixed several issues that occurred during the encryption and decryption process. These fixes included resolving key mismatches, correcting encoding/decoding inconsistencies, and ensuring that encrypted data is properly decrypted without data loss or failure. The error resolution improved the stability and reliability of the app's security module.

Planned Work for 20/11/2025 :

1. Continue working on lottery app
